MASTERCLASS EVOLUTION®

FRIDAY 28-08-2026

Join leading orthopaedic surgeons for an immersive cadaveric masterclass dedicated to the Evolution® Medial-Pivot Knee and the principles of kinematic alignment in total knee arthroplasty.

Designed to bridge surgical theory and hands-on practice, this advanced educational experience offers participants the opportunity to explore the philosophy, biomechanics, and clinical application of the Medial-Pivot design within a kinematic alignment framework.

Through expert-led presentations, surgical demonstrations, and guided cadaveric procedures, attendees will gain practical insights into restoring the patient's native joint anatomy, preserving soft-tissue balance, and reproducing natural knee kinematics.

Participants will learn how kinematic alignment principles can be applied to optimize implant positioning, reduce the need for ligament releases, and support a more personalized approach to TKA.

Experience the intersection of innovative implant design, personalized alignment philosophy, and hands-on learning in an exclusive cadaveric environment.
