# MASTERCLASS EVOLUTION®

## THURSDAY 27-08-2026

Join leading orthopaedic surgeons for an immersive cadaveric masterclass dedicated to the Evolution® Medial-Pivot Knee and the principles of mechanical alignment in total knee arthroplasty.

Designed to bridge surgical theory and hands-on practice, this advanced educational experience offers participants the opportunity to explore the philosophy, biomechanics, and clinical application of the Medial-Pivot design in a cadaveric setting.

Through expert-led presentations, surgical demonstrations, and guided cadaveric procedures, attendees will gain practical insights into achieving precise mechanical alignment, optimizing soft-tissue balance, and reproducing native knee kinematics.

The course will focus on evidence-based techniques that support reproducible outcomes, implant stability, and patient satisfaction.

Experience the intersection of innovative implant design, surgical precision, and hands-on learning in an exclusive cadaveric environment.
